StonewaterControlSystems

## Stonewater's Platform Provides an "End-to-End" Network Solution

Stonewater's platform enables worldwide network connectivity; aggregates data from all connected sites, devices and sensors; and monitors and controls a variety of distributed devices in near real time.

- The system monitors the health and reliability of any public or private network and detects device malfunctions by continuousely recording their heartbeat at configurable time intervals.

- The system architecture ensures enhancement of sensor reliability and validation of alarm conditions.

- SNMP trapping provides forensic analysis of all system components.

- The system architecture features the highest degree of fault tolerance ensured through redundant data centers and communication pathways.

- Intrusion protection and data encryption meet the most stringent security requirements.

- Grouping of distributed sites, disparate sensors and devices into logical categories ensures that all critical devices and sensors are visible on one screen for easy asset management.

- The Stonewater system is used in various vertical market applications: government building security, forensic analysis, commercial and industrial energy management and electric power curtailment.
